

FERTILIZER BASED ON BORO

BOROCOMPLEX

Mixture of microelements boron (B), copper (Cu), iron (Fe), manganese (Mn), molybdenum (Mo) and zinc (Zn) (MgO 2)

DESCRIPTION

It is a formulated of new constitution, that combines the activity to control of diseases by deficiencies of zinc and boron.

A formulation suitable for preventing and treating microdeficiencies of all those crops where unfavorable situations cause inadequate development of the plant. Thanks to a high presence of zinc and manganese, it improves the equilibrium state of the plant and the organoleptic characteristics of the fruit (flavor, size).

The formulation is a complex of chelated microelements, combined to the magnesium present in high quantity.

The formulation is designed to provide all the micronutrients in readily assimilable form, at last to ensure maximum absorption and not to create antagonism. The product is also characterized for the adequate presence of ajuvant that ensure proper foliar absorption.

METHOD 'AND DOSAGE

Typically is apply for fertigation at doses of 2-5 kg/ ha.
And for away foliar at doses of 100-200 g / hl.

Suitable in all cultivation :
VEGETABLES, TREES, INDUSTRIAL (cereals, barbarbietola, corn, potatoes)
and for cultivation: FLORAL, and DECORATIVE,

repeating more times, 2-3 times, in function of the cultivation needs.

*The doses given are the result of applied and calculated for distributions to normal volumes of water.
For the correct application in the specific climate, soil and crop, it is advisable to consult your service technician.
Respect the time of shortage.*

COMPOSITION

Boron (B) soluble in water	6.0%
Copper (Cu) soluble in water	0.3%
Copper (Cu) chelated with EDTA	0.3%
Iron (Fe) soluble in water.....	1.0%
Iron (Fe) chelated with EDTA	1.0%
Manganese (Mn) soluble in water.....	0.7%
Manganese (Mn) chelated with EDTA	0.7%
Molybdenum (Mo.) soluble in water	0.02%
Zinc (Zn) soluble in water	5.0%
Zinc (Zn) chelated with EDTA	5.0%
Magnesium Oxide (MgO) soluble in water	2.0%

To be used only in the case of a recognized need. Do not exceed the appropriate dose

chelating agents: EDTA
PH range that ensures a good stability of the chelated fraction: 4-9

The methods of analysis not reported are internal methods of the manufacturer.
