

BORO L.11

BORO ETHANOLAMINE

DESCRIPTION

It is a technologically product advanced inasmuch the complex bond between the boron and the organic component complexing ethanolamine, allows a more rapid and homogeneous conveyance, without creating phytotoxicity from boron, and making today one of the best products based of boron available for foliar and radical applications.

It is believed that the boron is to be put in relation with the replacement of the sugars and especially for their mobilization from the centers of production to those of accumulation and indirectly with the production of auxins; also the reaction to photoperiod is affected by boron.

From all these observations is the complex action of boron on vegetal metabolism, and if seems to be dominant its importance as an activator of the processes associated with pollination and maturation of the fruit, no less important than those appearing in the cytoplasm and on the status of health of the plant, also to promote increased resistance against parasitic diseases.

METHOD 'AND DOSAGE

Generally is apply for away foliar at doses of 80-200 gr. / Hl.

and for fertigation at doses of 5-8 kg / ha.

repeating more times, in function of the needs.

*The doses given are the result of applied and calculated for distributions to normal volumes of water.
For the correct application in the specific climate, soil and crop, it is advisable to consult your service technician.
Respect the time of shortage.*

COMPOSITION

Boron (B) soluble in water 11.0%

FIRST MATERIALS: BORO ETHANOLAMINE

To be used only in the case of a recognized need.
Do not exceed the appropriate doseThe methods of analysis not reported are internal methods of the manufacturer.

The methods of analysis not reported are internal methods of the manufacturer.
