

FOSFOTAL

PHOSPHATIC FERTILIZER WITH ZINC (Zn)

DESCRIPTION

Is characterized for the simultaneous presence of phosphorus and zinc. The phosphorus is an element that accelerates the vegetative cycle of the plant, encourages rooting, flowering, fruiting and lignification.

The zinc increases the synthesis of auxin, protein synthesis and increases the absorption of phosphorus.

The symbiosis between these two elements provides a strong capacity of stimulus to the start of activities vegetative-productive and of flowering and fruit-set.

METHOD 'AND DOSAGE

Generally applies for away foliar at doses of 200-400 gr. / HI.
and for fertigation at doses of 30-50 kg / ha.

repeating more times, in function of the nutritive needs.

*The doses given are the result of applied and calculated for distributions to normal volumes of water.
For the correct application in the specific climate, soil and crop, it is advisable to consult your service technician.
Respect the time of shortage.*

COMPOSITION

Phosphoric Anhydride (P₂O₅) soluble in water 40.0%
Zinc (Zn) soluble in water 1.2%

The methods of analysis not reported are internal methods of the manufacturer.
