Solution of fertilizer 3-25-25 NPK with copper (Cu) at low content of chlorine

## DESCRIPTION

Is a liquid fertilizer to the total solubility and purity, suitable for all irrigation systems and all crops that can not tolerate impurities such as salinity, chlorine, sodium carbonates.

The particular formulation of phospho-potassium guarantees a speedy assimilation and utilization in various biochemical processes.

The product for the predominance of the component phospho-potassium is particularly suitable for demanding crops in potassium, in the vegetative phases between flowering and maturation.

Addition is in degree of to ensure a fertilizing action ready and prolonged in time and it distinguished for a greater mobility in the layers of the soil compared to other types of fertilizers phospho-nitrogenous, allowing increases of production and best quality characteristics of the production.
