

IDROPLANT ENPHOS

Fertilizer NP (Mg) 15-50 (2) with copper (Cu) and zinc (Zn) obtained for mixing

DESCRIPTION

The formulation of the composed has been studied for the phase at which it is necessary to develop and strengthen the stems both herbaceous woody.

The high solubility and purity make it suitable for fertigation in hose, drip and sprinkler irrigation. Nitrogen and phosphorus are acting in the first phase of crop development, bringing considerable stimulus vegetative and strengthening plants.

The micronutrients contained in doses qualifying facilitate the utilization and absorption of the main components.

METHOD 'AND DOSAGE

ypically applies for fertigation at doses of 80-120 kg / ha.

repeating more times, in function of the crops needs.

*The doses given are the result of applied and calculated for distributions to normal volumes of water.
For the correct application in the specific climate, soil and crop, it is advisable to consult your service technician.
Respect the time of shortage.*
