

IDROPLANT PROGRESS

Fertilizer NPK 9.12.40 low content of chlorine obtained for mixing

DESCRIPTION

The high solubility and purity make the product suitable for fertigation in hose, drip and sprinkler irrigation.

The contribution of nitrogen and potassium, which are present in great quantities, promotes the productive phase of the plant, causing the stimulus to the production.

The effect is also to have a positive influence on the differentiation of flowers and buds, causing an anticipation of flowering, a general increase in production thus influencing the strength, appearance and quality of the fruit.

METHOD 'AND DOSAGE

Typically applies for fertigation at doses of 80-120 kg / ha.
repeating more times, in function of the crops needs

*The doses given are the result of applied and calculated for distributions to normal volumes of water.
For the correct application in the specific climate, soil and crop, it is advisable to consult your service technician.
Respect the time of shortage.*

COMPOSITION

Total Nitrogen (N)	9.0%
Nitric Nitrogen (N)	7.0%
Ammonia Nitrogen (N)	2.0%
Phosphoric Anhydride (P ₂ O ₅) soluble in neutral ammonium citrate and in water	12.0%
Phosphoric Anhydride (P ₂ O ₅) soluble in water	12.0%
Potassium Oxide (K ₂ O) soluble in water	40.0%

The methods of analysis not reported are internal methods of the manufacturer.
